1/ GENERAL PRESENTATION

1.1 Allopass

Allopass is an integrator of billing systems by phone, SMS and Credit Card.

Being the leader on the market since 2001, Allopass is a product edited by the company Eurovox, subsidiary of the Eurovox group.

Eurovox is a Simplified Share Company with a capital of 252 000 euros, present in both the telematic and multimedia fields since 1993 (www.eurovox.fr).

In 2006, Allopass and Eurovox incorporated the Hi-Média SA group with a capital of 2 663 171 euros. Expert in interactive marketing, the Hi-Media group has been launched on 1996. Leader of independent Web Advertisers in France, Hi-Media is in third place in Europe, furthermore Hi-Media is in the First place regarding Interactive Marketing.

In December 2006, Frog Planet merged with another subsidiary of Hi-Media: Mobiquid. Therefore Allopass is now edited by Mobiquid, a company of limited responsibility with a capital of 819 808.82 euros.

Do you want to ensure and to secure your website entirely or simply a part its content? The solution that we propose to you consists in securing access to your documents or to any other type of web content (photos, videos, images...) via the Allopass system and in making money at the same time.

Here is how simple it is: you propose to your site's visitors to purchase one or several Allopass codes in order to be able to access the content they want to access. They will obtain these codes either by calling a premium rate number or by paying with their Credit Card online , or, else, by sending an SMS.

Allopass is the most user-friendly and efficient microbilling platform currently available on the market. Over 100 000 webmasters have already placed their trust in our services.

Being a mere online payment system, we exercise no influence over your site's content. However, we impose a set of regulations binding our users to meet different criteria (for instance, you are bound to provide the information or the service you get paid for, to indicate your E-mail address so that the web users can contact you in case they encounter a problem; your site's visitors should be able to access your secured content instantly after having integrated the code provided by Allopass, the ICRA protection pop-up window containing the number to dial should automatically appear, etc.).

Please, take note of the fact that we carry out regular audits of our member sites so as to make sure that all of the customers using our services do comply with the French law and the Allopass internal charter.

1.2 General information

Allopass is a tool that we created that provides you with a reliable and user friendly microbilling solution.

The Allopass system filters access to your content and guarantees the confidentiality of your URLs.

The microbilling by phone is granted with the guarantee of the local national operators, since the settlement is done via the telephone bill: you are thus sure to receive your payouts.

Creating an Allopass account is completely free of charge and commitment free. All you have to do is to click on our site's Sign up section. No special software is required and the activation is instantaneous.

Once your signing-up procedure is completed and your Allopass account is created, you receive a confirmation E-mail providing you with your account's password. All you need to do in order to access your personal webmaster pages is to insert this password together with your E-mail address in the space called Webmaster Access of our home page. This is a straight forward and user friendly interface that will facilitate your back office management of your site.

NB: In case you sign up as an Allopass member with a company status, you can begin to use the Allopass system as an individual member while your company status contract is being edited and validated by our Sales Department.

2/ DIFFERENT MODES OF PAYMENT

Allopass provides you with a large variety of highly effective and reliable services that will allow you to maximize the benefits generated by your site.

We offer to you several payment options. This enables you to put at the disposal of your site's visitors different modes of payment and to set their parameters.

2.1 One-shot microbilling option

We make it possible for you to provide your site's visitors with one-shot microbilling by phone, P-SMS and Credit Card options.

It is up to you to determine the mode(s) of payment you wish to appear on your page, given that each of them presents an advantage of its own:

a - microbilling by phone:

A web user visiting your site will obtain his/her code after having dialed a local premium rate number. The duration of such a phone call does not exceed 90 seconds (e.g. obtaining an A-level Allopass password for UK-based web-users will always cost them £1,50); the money transfer, which is directly insured by the operator via the phone bill, guarantees that you will collect outpayments; there is no need for your customer to disclose his/her banking details. Given that the rating of the premium rate numbers varies from one operator to another, please, look at our table summarizing all the rate brackets for microbilling by phone.

Go to our home page, and click on the tab About Allopass, then choose the section Outpayment table, subsection microbilling one shot (or go to the end of this document, 8/ OUTPAYMENTS GRID).

However, you have the possibility to differentiate your content's access rate through the number of passwords that your site's visitor will have to purchase in order to access your fee-based content.

*We recommend that you do not exceed 3 passwords to provide access to your content so as to avoid discouraging your customer and thus losing him/her (1 password = 1 call, so your site's visitor will have to make a new call for any additional password).

*First and foremost, we recommend that opt for this microbilling for small fees (e.g., in case of the UK, for amounts under £4).

b - microbilling via premium rate SMS

Similarly to the case of micro-payment by phone, your site's visitor will need to send an alias («CODE» ou «AP») to a premium rate SMS number.

In return you customer will receive an Allopass code that will allow him/her to access your content directly from his/her cell phone.

*In France, Morocco and the United State, premium rate SMS are subject to particular regulation. This is why you need to make a specific request by E-mail to our Customer Customer Department (contact@allopass.com) for this service to be activated on the sites based in those countries.

c - microbilling via Credit Card:

This is a traditional Credit Card payment mode for costs ranging from 2€ to 3€. This is a good alternative to micro-payment by phone in several cases: in case you wish to target the countries in which audiotel services (premium rate numbers) are not available, and in case the cost of your paid-access content is superior to the rates proposed by the telephone operators.

This solution allows your customers to purchase several codes at once, which may be interesting if accessing your website requires inserting several codes. Once the payment is accepted, the code displays on the screen. As for any credit card billing, your customer also receives an email that confirms the billing as well as the purchased code.

*Credit card billing and Audiotel system are complementary payment means which we advise you to propose altogether to your customers.

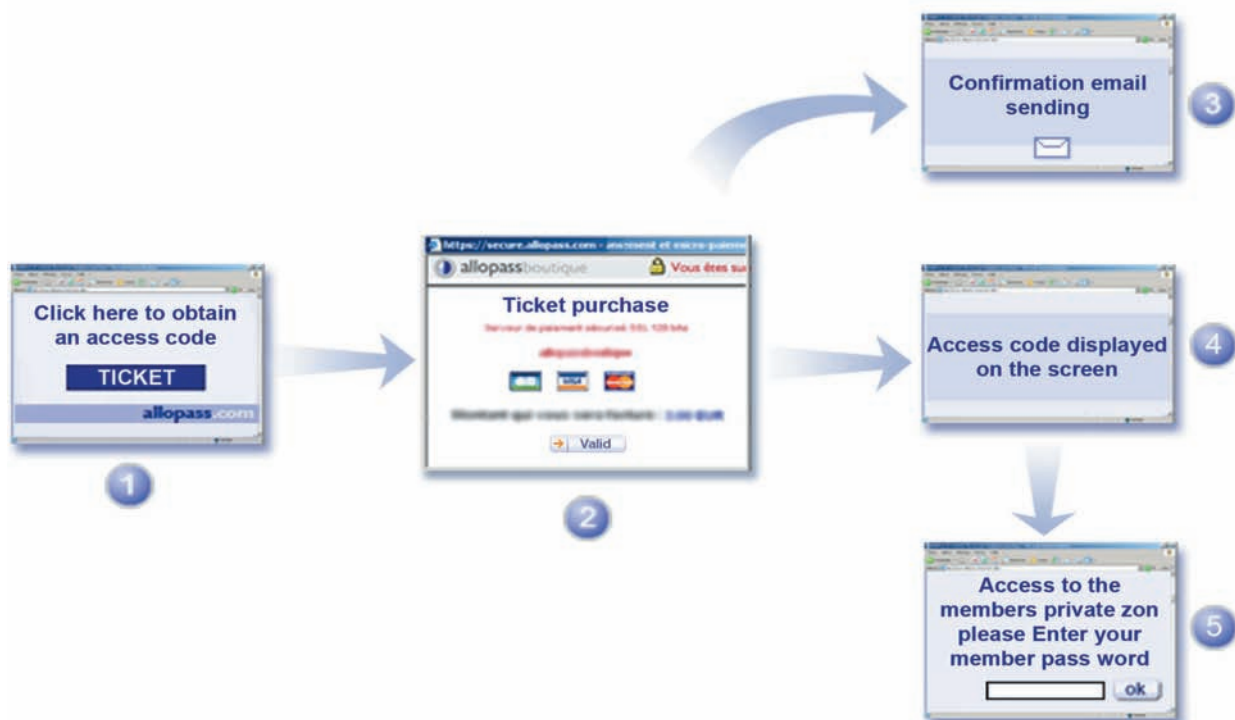

2.2 Payment by credit card from 3 € up to 50 €

Concerning rates over 3 €, we propose two payment means available by Credit Card.

a- One Shot

This is a code valid only once, which rate you can fine-tune much more accurately than phone operators-imposed ones. You can charge up to 50.00 €. As for micro-payment, your customer will see his code display on screen and receive an email that confirms the billing as well as the purchased code.

*We advise you to use this payment means for high added value contents, like software/ photos / videos/ licence downloads, technical, professional data, reports of experts, etc.

b- Subscriber Pass

As its name indicates it, this is a Credit Card subscriber formula. The code provided to your customer is valid not only once, as for previous billing solutions, but over a period of time that you determine by yourself, stretching from 0 to 999 days.

You also define the rate parameter, up to 50 €. Your subscriber receives an email that confirms his billing as well as his code, and he will be able to access your document as many times as he wishes over the whole period of validity of his code.

You can also set up an automatic subscription renewal option: by the end of the period of validity of his code, your customer receives an email that confirms the renewal (a link displaying in the first email enables him to cancel the automatic renewal at any time). You can also set up a preferential rate for any renewal.

If you don't choose the automatic renewal option, your customer will receive an alert email a few days before the expiration date. This message gives the opportunity to rebill immediately with or without preferential rate, according to your setting.

*You can set up your Subscriber Pass so as to make it compatible with already existing Audiotel, Subscriber Pass or One Shot documents.

For Credit Card billing solutions, your customer can create his personal account. He can manage and monitor his purchases on www.myalopass.com

3/ IMPLEMENTING THE BILLING SOLUTIONS

3.1 Creating and installing payment scripts

Scripts are html programs which turn your documents into protected paid-access documents, once installed in the source code. They are particularly easy to install. After registration, log on to your 'Webmaster' area, go to the header 'Management' and select the first option 'Manage your documents'.

> Stage n°1 : creating your website

When clicking on 'Manage your document', you are redirected to a general page displaying the list of your websites.

A website is a group of documents you want to protect. You have to give a website's name to each of the groups of documents you want to turn into paid-access documents, even in case your website holds one document only. In order to create it, you just have to click on the link: 'Add a site', and to fill the application.

> Stage n°2 : creating a document

Wednesday 14 March

alopass.com
Solutions for payment and micropayment on the Internet

HOME ABOUT ALOPASS NEWS CONTACT US TERMS & CONDITIONS EXIT

WEBMASTER AREA

Document management

The documents you want to protect are classified by site.
To create or add one or more Alopass documents (and therefore receive their payment scripts), you must first register the site they belong to.

You have currently registered 5 sites, with a total of 54 documents. [+ Add a site](#)

Name of the site		Modify
TES25	0 documents	
TYOTOBIS	2 documents	
TOTO	13 documents	
GHS GD	17 documents	
TEST CB ONE SHOT ET PASS ABONNÉ	22 documents	

After you register at least one site, click on the "Documents

 button of the appropriate site to add, modify, or delete a document or a part of your site that you want to make paid access.

Once you created your website, click on the document icon, in the document column, so you can register the data concerning the page you wish to create a paid-access for. You land on the interface dedicated to the creation of document.

Up-screen, a menu bar makes it possible to select the payment means you wish to use: microbilling, One Shot, or Credit Card billing.

At the end of this procedure, an application form displays, and asks you about technical data you wish to apply: coordinates of the pages toward which your customers will be redirected to, your test code, number of codes required to access your documents, countries which are granted with access to your website, price brackets, period of validity of the codes and, if you wish so, implementation of a complementary credit card microbilling system.

The screenshot shows the Alopass.com webmaster interface. At the top, there is a navigation bar with links for HOME, ABOUT ALOPASS, NEWS, CONTACT US, TERMS & CONDITIONS, and EXIT. Below this is the 'WEBMASTER AREA' with a sidebar menu containing sections for Management, Your account, and Partnerships. The main content area is titled 'Document management' and contains a text box explaining that documents are classified by site and that users must register sites to receive payment scripts. It states that the user has currently registered 5 sites with a total of 54 documents. Below this is a table listing the sites and their document counts, with options to add, modify, or delete documents for each site.

Name of the site	Documents	Modify
TES25	0 documents	[Add] [X]
TYOTOBIS	2 documents	[Add] [X]
TOTO	13 documents	[Add] [X]
GHS GD	17 documents	[Add] [X]
TEST CB ONE SHOT ET PASS ABONNÉ	22 documents	[Add] [X]

*Examples of complete procedures

Implementing a UK bracket telephone microbilling system:

- Create your document in the rubric 'Manage your documents'
- Click on the website you want to add a document to.
- Select the microbilling option in the top-down menu

Your documents :

- Click on 'Add a document'
- Fill up the application form
- Place your pointer on the Audiotel option in the top-down menu for UK and make your selection:
- Validate by «clicking on» (at the bottom of the page)

Implementing a 15 € Credit Card subscription

- Create your document in the rubric 'Manage your documents'
- Click on the website you want to add a document to.
- Select the credit card billing in the top-down menu

Your documents :

- Click on 'Add a document'
- Select the subscription option
- Fill up the application form and define the parameters of your document
- Validate by «clicking on»

> Stage n°3: integrating the script

You can see the script-implementation icon  appears, only once the application form is filled and the document created.

Click on this icon, and a new window will open, in which we explain the whole procedure for implementing the billing script, as well as a few practical tips. The script itself merely requires a copy/paste manipulation into the source code of your document in order to be installed.

You will have to integrate two scripts into your source code.

The first script is a billing script. It programs the displaying of the pop-up, along with the flags and premium phone numbers that should be dialled in order to obtain a code. It also provides the integration cell for this code.

The second script is an access-denying program that protects the privacy of your URLs and ensures security for your page. It works by using a cookie.

If you want to install a php language protection, you will find all required information in the 'Technical Support' rubric.

*Mind to specify to your clients that they must accept cookies so their codes work properly.

The procedure for accepting cookies is fully presented in the Technical FAQ, chapter 'Technical information'.

Q : Do my clients have to accept cookies ?

3.2 Operating principle

The operating principle is very simple too.

We provide you with a html script that you integrate into the source page of your documents. Right away, it will be impossible to access your documents without an Allopas code.

This script displays a billing script presenting the flags of the countries for which you grant access to your website. The web user will just have to click on his home country's flag.

Then, a pop-up indicates the guidelines to obtain a code.

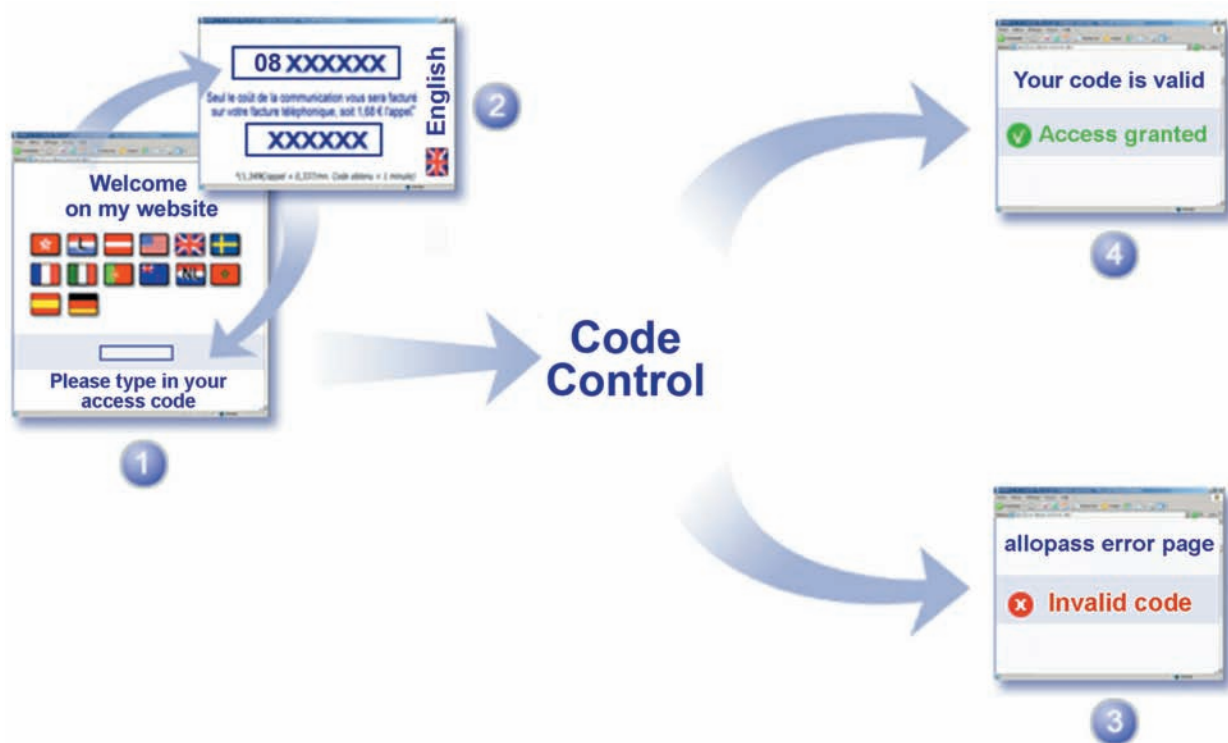

Once this code is integrated, a request is sent to our server, which looks up its validity.

If the code is valid, your client accesses your paid-access documents.

If it is erroneous, your client is redirected to an error page.

NOTE: If you use the iframe script, the guidelines appear in the same window :

no pop-up will open. Furthermore, the up-to-dates you may be willing to perform now and then are automatically taken in account by the iframe script, which you do not need to re-install.

4/ RATING

4.1 Rating for one-shot microbilling

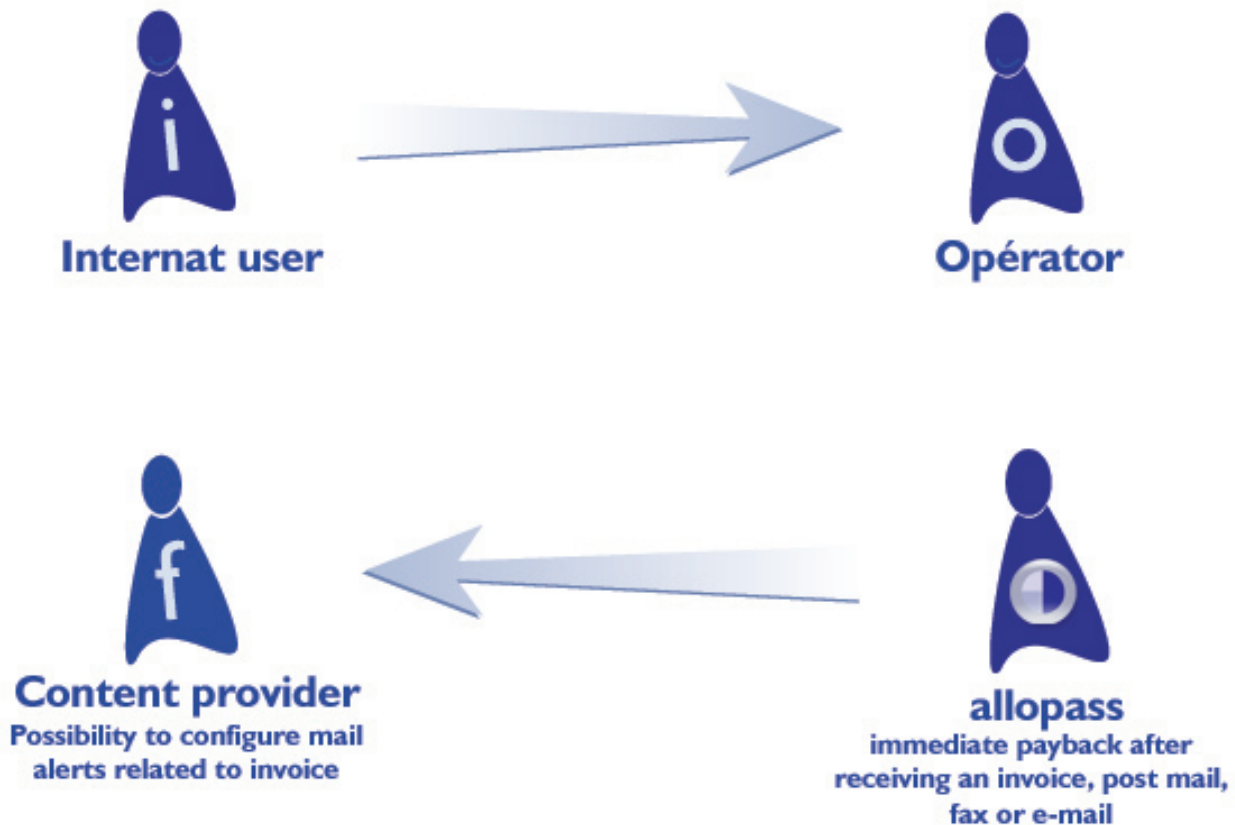

a- Principles

There are price brackets for each audiotel billing solution, varying with countries, and phone operators.

Our website www.alopass.com shows grids detailing the whole series of payouts for each price bracket, from the toll payed by your client, to the VAT, and the operator's share, Allopass's one, and your own payout.

A detailed payment grid is provided in appendix, at the end of this document.

Scheme : financial cashflows

b- Codes supplied by premium-rate call

Your client pays a package price and obtains a code, valid according to the parameters you have set up (independently from the duration of your client's visit). Thus, you always draw the same benefit. For instance, for each Allopas code purchased through a France B bracket, you earn 1.00 € excluding VAT. Your account is credited each time a new code is keyed in your pages.

c- Codes supplied by SMS

In the same way, for each 1.50 € (including VAT) SMS sending, you always earn 0.52 € excluding VAT

*Beware the implementation of SMS brackets for France, the USA and Morocco is submitted to our agreement (contact@allopas.com)

d- Codes purchased by Credit Card

Perfect for the countries beyond our Audiotel services, or for clients who prefer credit card billing, we remit to you 1.20 € (excluding VAT) for a billing of 2.00 € (including VAT) and 1.80 € (excluding VAT) for a 3.00 € billing (including VAT).

4.2 Rating for payment by Credit Card for value 3-50 euros

Regarding One Shot and Subscriber Pass solutions, we remit to you 85 % of the amount excluding VAT

For instance, for an amount of 10 € (including VAT), you earn : $10/1.196 \times 0.85 = 7.11$ € (excluding VAT).

In case the payment is declined, the sum credited to your account is withdrawn, and we pay the chargeback fees.

5/ OUTPAYMENTS

5.1 Collecting your outpayments

In your webmaster area, in the chapter 'Your account', a rubric is named 'Request outpayment'. In this rubric, you can request an outpayment according to the balance of your account.

You can choose from several options:

- You can ask to be sent French or Belgian cheque, to withdraw the total sum of money, or to leave a rest. Once the request is made, you will be receiving your outpayment by mail.

*We remind you that Belgian cheques are surcharged by 1.00 €, which you have to take into account when requesting an outpayment. For instance if your account is credited with 16.00 €, you can request up to a maximum of 15 € by means of a Belgian cheque.

For any depositing in a non-French or non-Belgian bank, we suggest you to ask your bank for information concerning any possible supplementary bank fees.

In order to request an outpayment, you must have at least 5 € in your account.

You can request up to two outpayments over a 7 day period.

- You can request an outpayment by money transfer for a minimum of 150.00 €.

Transfers are processed twice a month, on Friday.

In order to have the 'transfer' option displayed on your Alopass account, you must ask for it by email to contact@alopass.com, and provide the information required by your outpayment interface.

Select type of payment :

▼

CFR:French cheque - CBE:Belgian cheque

> Purchasing codes

We also offer an option to purchase codes in stead and place of outpayments. You benefit from preferential rates, if you change your gains for Allopass codes that you can use on any website accepting French codes (A bracket: 0.28 € instead of 0.56 €, B bracket: 1.17 € instead of 1.80 €).

5.2 Monitoring your outpayments

In your webmaster area, rubric 'Your account', 'Payment tracking', you can find a table summing up all the data regarding the outpayments you requested to Allopass: transaction ID, date of your request, sum you requested, and state of your demand (sent, in progress, etc.).

5.3 Special features for companies

If you wish to receive your outpayments under the name of your corporate or association, it is necessary for us to set up a professional contract. In order to do so, you must register as a corporate account and, if you run your website from abroad, possess an official registering number.

> Registering as corporate account

You can choose to register as a corporate account right from the beginning. If you wish to do so, tick 'Yes' in the field 'Corporate name' in the application form.

A second form, specifically tailored for corporates, will appear as soon as you have validated the first one. Our commercial department will then take contact with you and forward two contracts to you, that must be sent back, once you completed them by writing your initials on the margin of each pages, signed them, and attached documentary evidence of your status. Even if you start as an individual account, you can upgrade to a corporate account whenever you want.

In your 'Webmaster' area, under the header 'Your account', rubric 'Upgrade to a business account', you can find another form that turns your individual account into a corporate account.

> Outpayments

In your Allopass account, all outpayments are stated in euro, excluding VAT. For any outpayment request, you have to send an invoice along with all required pieces listed on the interface. In case you select the automatic outpayment option, we send an outpayment request, which you need to answer with an invoice of the same amount.

You can send us your invoices attached to an email at facture@allopass.com.

If you wish to send them through postal mail at :

Allopass / Hi-Media
2, rue Saint-Joseph, 75002 Paris, France

6/ MANAGEMENT TOOLS

6.1 Log file

The log file is a management tool that recapitulates all transactions and codes processed through your paid-access documents. You can find it in your Webmaster area, rubric 'Management', 'Log file'. It enables you to study thoroughly the evolution of your account.

For each month, each transaction is classified according date, website, document, price bracket, code, call duration, outpayment and status (code accepted or denied, test code, means of payment...).

You can choose to visualize the code you look for.

You can export this table in Excel format by clicking on the link : Download CSV

Subscription being a particular status, we thus propose another rubric dedicated to 'Subscriber pass tracking', still under the header 'Management'.

A list of Subscriber passes is summed up in a table, as well as the documents for which each one of them is valid for, their expiration date and, if you set up an automatic subscription renewal, the number of renewals already charged.

By this means, you can easily keep up with each of your subscriptions.

6.2 Statistics

In your Webmaster area, header 'Your account', rubric 'Statistics', you can find a page displaying statistics related to your earnings, in the form of tables. The first one states statistics related to transactions. They are classified according to the means of payment used by your clients (One shot payment, Credit Card, etc., according to which option your pointer is spotted on). As for the Log file, we provide these statistics in the form of 1 month periods, and you can select the desired period.

Beneath, we also present global statistics related to your earnings, earning forecasts, based on the amount of transactions generated by your website, and your statistics over the current year. You can also track up statistics concerning codes purchased via our interface, and the sums previously remitted to you.

The icon enables you to obtain more detailed statistics you are interested in, and makes it possible to keep up with the live evolution of your account.

The icon enables you to visualize the evolution of your profits over a 30 day period, in the form of a graph, compiling the ratio access/day

You can visualize it either as a whole, or document by document.

Every tool we provide you with enables you to check into the evolution of your account and the benefits you draw from it. Simple to use, these tools guarantee the transparency of the cashflow.

7/ ALLOPASS BENEFITS OF ALLOPASS

We regard our relationship to you as a specific partnership, an e-cooperation. This is why we put forth at your disposal all means and tools likely to help you to increase your revenues and favour the emergence of networks connecting webmasters who work with us. Consequently, we propose three kinds of trades that you may find yourself interested in.

7.1 Affiliation program

The affiliation gives you ground to create a partnership with another website which webmaster is interested by your own content or, conversely, to enhance your documents with another website's ones, by the means of banners or links.

Setting up such a partnership is very easy: we generate scripts that empower the links you installed on your pages. We also provide you with support tools which help you managing your affiliations, and pave the way towards more complex programming.

For further information, please consult the technical FAQ. The available affiliation is on the website. If using a more complex programming, you should have a look at the rubric 'Technical Information'.

7.2 Allopass Sponsoring

If you install an Allopass banner on your website and one of your clients registers with Allopass via this banner, you earn 10% of the Audiotel profits this client generates.

8/ OUTPAYMENT

(RATES IN EFFECT ON NOVEMBER 1ST 2007)

1- Micro-payment by phone call and SMS

Your visitor pays a package price in order to obtain his code, whatever is the duration of his visit on your website
